

# FLOW CORE LUNCH & LEARN SEMINAR

## ThinkCyte's VisionSort - A Highly Innovative, Label-free Cell Sorting Technology using Ghost Cytometry

Ghost Cytometry (GC) is a new approach using Structured Illumination that looks into the cell via proprietary optic designs, to assay the cells by internal changes including cytoskeletal structure and re-structuring, without labels. This label-free technique essentially provides a "Cellular Fingerprint" which can be used to identify and sort cells of interest.
